# Grooving and turning

## **CUTGRIP**

### **GEHSR/L-SL Tools with Side Clamping Mechanism**

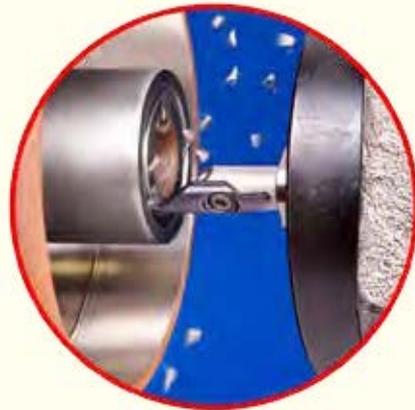

ISCAR is introducing the new **GEHSR/L-SL** tool family for Swiss-type and screw machines. These new tools with a unique clamping mechanism can solve the main problems related to insert clamping and replacement on Swiss-type and screw machines. They are an improved style of the current **GEHSR/L** screw-clamped tools.

## **MIN CUT** MINI FACE LINE

### **Face Grooving and Turning Family for Dmin 8 mm**

ISCAR's family for face grooving and turning in a diameter range of 8 to 17 mm for up to 5.5mm grooving depth, covers the range between ISCAR's **PICCO** and **CHAMGROOVE** tools.

#### **Tool Features**

- Can also be used for rotating applications.
- Internal coolant hole, directed to the cutting edge.
- Can be used for grooving in deep holes.
- Uninterrupted chip flow on the insert rake.

# Grooving and turning

## SWISSCUT INNOVAL LINE

### Upgraded SWISSCUT Line

A compact tool design for Swiss-type automatics and CNC lathes, providing reduced setup time and easy indexing without having to remove the toolholder from the machine.

- The same tool and insert can be used in both front and back clamping
  - Insert indexing without removing the screw
- ISCAR is upgrading the **SWISSCUT** line. The new inserts feature an innovative oval-shaped hole that enables 2 important improvements.

The new clamping design uses a special screw that can be accessed and operated from both tool sides.

In the upgraded line the insert can be indexed without the need to fully remove the screw. Therefore, there is no risk of falling parts and indexing is easier and faster.

**Dmin. 4 mm**

## SWISSTURN

ISCAR features a variety of ISO standard inserts, with small shank sizes. Also available are many standard geometry inserts with precision ground cutting edges and small radii for manufacturing small and thin parts. Toolholders with a unique clamping device for solving the main problems related to insert clamping and replacement on Swiss-type machines.

# Parting

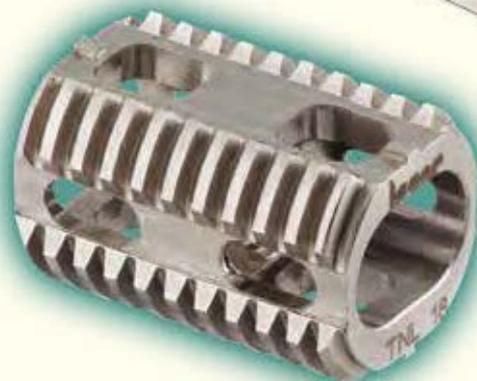

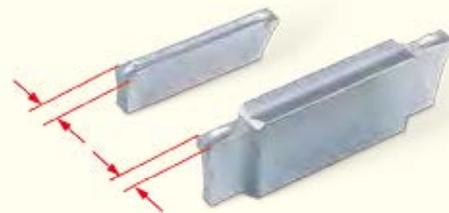

## **PENTACUT** PARTING GROOVING LINE

The **PENTACUT** insert has 5 cutting edges, useful for multifunction applications including grooving, parting, recessing and chamfering. This cost-effective insert is designed to perform shallow grooving operations and parting of small solid bars up to 12.5 mm in diameter. Each cutting edge on the pentagonal shaped insert is equipped with a unique J-type positive chipformer that provides excellent chip control in grooving, parting and recessing (light side turning) applications.

## **DO-GRIP**

ISCAR's short head, small shank holders (8-12mm) use **DO-GRIP**'s economical, double-ended twisted inserts in widths of 1-3 mm.

These inserts, featuring advanced PVD coatings, are capable of parting small diameter and thin walled parts while saving workpiece material. The new shank design features a very short clamping head and a slanted screw for convenient indexing - essential features for operating in the very limited space of Swiss-type automatic and small CNC machines.

# Threading

## **ISCAR**THREAD

ISCAR offers a wide range of threading standards for both external and internal operations. The smallest triangular laydown insert is the 06IRM which can be used for internal threading in minimum bore size of 7 mm. Other ISCAR threading systems include:

- PICCOCUT – solid carbide bars for minimum bore diameters of 4 mm.
- MINICHAM – miniature inserts for minimum bore diameters of 6 mm.
- CUT-GRIP and CHAMGROOVE – for a variety of innovative internal and external threading applications.

**Dmin. 4mm**

## **PENTACUT** THREADING LINE

- Multi-corner, five cutting edges, which provide an advantageous price per cutting edge
- Combination of very rigid clamping system and a strong insert design enables machining at very high machining parameters
- Can be used for threading between walls to enable complete part production on bar feeder machines
- Inserts feature chipformers, providing short and easily exposed chips, excellent accuracy and surface quality

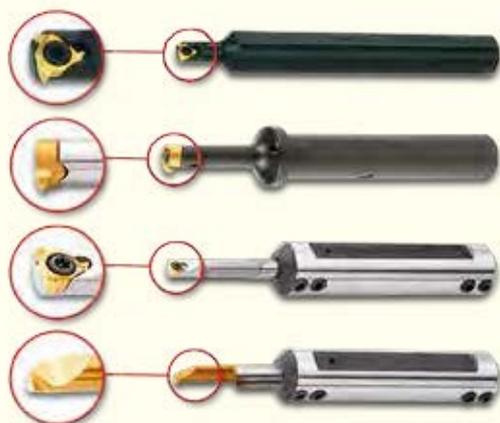

**Dmin. 16mm**

### **Whirling Head**

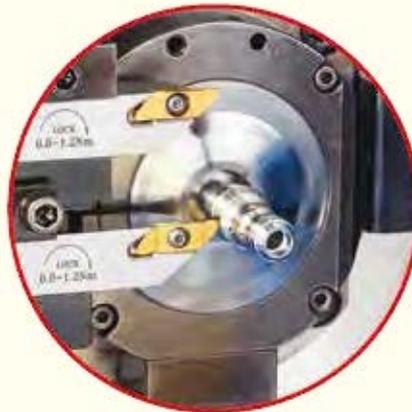

Whirling tools are provided on request. Attached is a list of available whirling tools according to the machine model being used.

The customer should specify his specific thread profile and the required number of inserts in the cutter (or leave this decision to ISCAR designers).

The inserts are made from PVD coated grade IC908.

# Grooving and Parting

## **CUTGRIP** **PENTACUT** JET LINE

### Grooving and Parting Tools for High Pressure Coolant

As in the ISO turning line, **JETCUT** groove-turn and parting tools also feature coolant outlets near the cutting zone and thus the coolant jet increases the amount of coolant that reaches directly to the cutting edge and chips.

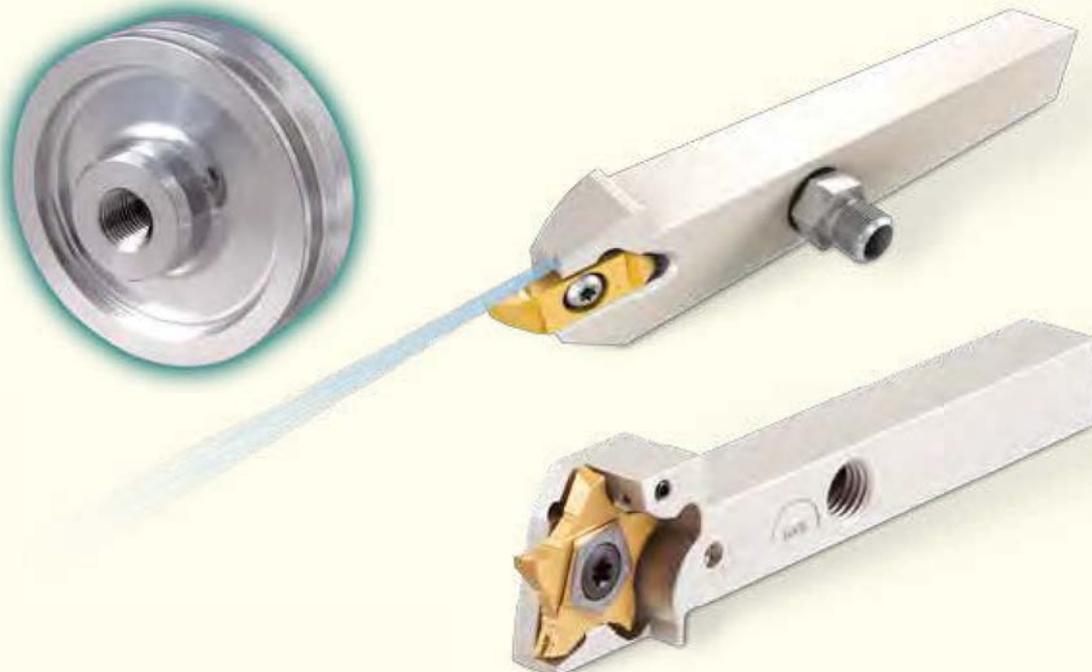

In grooving and parting operations, applying high pressure coolant provides excellent chip breaking results on all materials.

## **JETCUT** **SWISSCUT** INNOVAL LINE

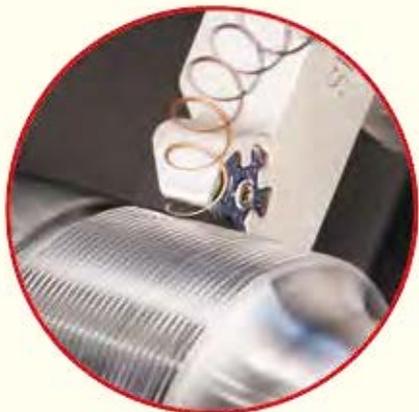

### Grooving and Parting Tools for High Pressure Coolant

Following the very successful launch of the **SWISSCUT INNOVAL** line and the smooth transition from the old line, ISCAR is expanding the product range: Tools with high pressure coolant channels (**JETCUT**) pinpointed directly to the cutting edge.

The tools can handle pressure up to 340 bars. They will be available in 10 to 16mm shank sizes.

# Turning and Threading

## **DECAIQ**THREAD ECO THREAD

### **New Tangentially Clamped Threading Inserts, Featuring 10 Cutting Edges.**

This unique (patented) geometry is a 16 mm round insert with 5 double-sided corners, providing 10 cutting edges. The new geometry provides the most economical price per threading corner (when compared with the popular 3 corner laydown inserts).

## **ISOTURN**

### **Boring Bars with Coolant Channel and New Small Size Inserts for Miniature**

The boring tools for small diameters are available with steel and solid carbide shank options. These new tools carry new positive inserts.

## **JETCUT**

### **SWISSTURN Toolholders**

The new tools were designed for Swiss-type automatics and CNC machines. They include tools for ISO standard screw-clamped and lever-lock rhombic 80° (C-type), 55° (D-type) and 35° (V-type) inserts, all with 7° positive flank relief inclination.

# Versatile System

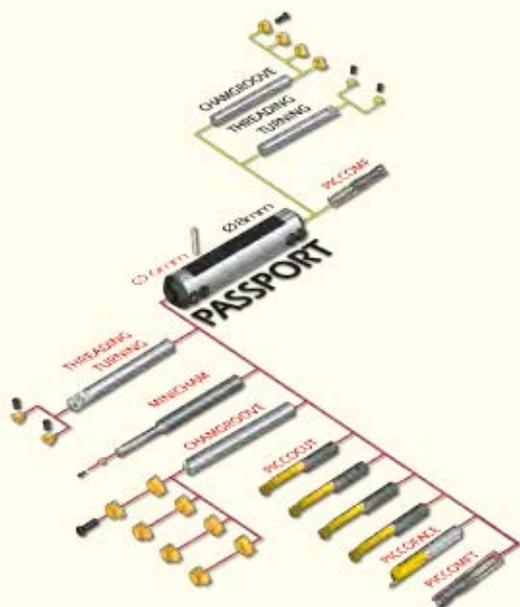

## **PASSPORT**

The PASSPORT is a single holder-bar that is capable of clamping a variety of solid carbide shanks – the VISAS – that carry various inserts. The holder-bar accommodates 2 different diameters, one on each end, as well as both right- and left-hand shanks. This system allows the user to adjust the shank's extension for maximum rigidity. The PASSPORT system is designed for boring, grooving, profiling, back turning, threading and undercutting.

This system provides endless economical tooling combinations.

### **One Economical Holder for Many Applications**

**Boring • Grooving  
Profiling • Back-Turning  
Threading • Undercutting**

## **PICCOACE**

### **High Precision Holders for PICCO Inserts**

The growing demands for high accuracy and flexibility in clamping orientation have led **ISCAR** to develop a new advanced line of **PICCO** holders. The **PICCOACE** features a unique patented clamping system which sets new standards for three highly important properties: accuracy, rigidity and flexibility of clamping orientation.

### **No Setup Time**

# Versatile System

The new **PICCO MF/MFT** was designed in particular for use on Swiss-type and all other machines that produce miniature parts. This family of tools provides a unique cutting geometry and machining abilities that combine the work of a few tools into one.

**PICCO MF/MFT** is a part of the versatile **PASSPORT** system.

## **PICCOMFT**

The Drilling, Turning, Boring and Threading Combination Tool  
**Dmin. 4 mm**

## **PICCOMF**

The Drilling, Turning and Boring Combination Tool  
**Dmin. 3 mm**

## **CHAMGROOVE**

The same shank can carry either right- or left-hand inserts for turning, threading and grooving in bores as small as 8 mm. This system features easy mounting and indexing. **CHAMGROOVE** is a part of the versatile **PASSPORT** system.  
**Dmin. 4 mm**

## **MINICHAM**

Applications inside bores as small as 4 mm can now be performed by using **ISCAR's MINICHAM**. This system features secure, self-clamping inserts with no spare parts. The unique cartridge is used for mounting and indexing the inserts. **ISCAR's MINICHAM**, a part of the versatile **PASSPORT** system, has eliminated many of the problems associated with very small inserts.  
**Dmin. 4 mm**

## **DR-MF**

**ISCAR** introduces the **DR-MF**, a multifunction tool. The new tool can be used for manufacturing small sized components. It reduces production time and the number of tools needed.

# Milling Innovations

## **SOLIDMILL** PREMIUM LINE

Micrograin solid carbide endmills with extended tool life are a part of the **ISCARMILL** family. These endmills have an improved design and are available with the most advanced TiCN or TiAlN PVD coatings, in a range of 2-20 mm. Ball nose endmills are available in a diameter range 3-20 mm.

**Dmin. 4 mm**

## **MULTI-MASTER** INDEXABLE SOLID CARBIDE LINE

**MULTI-MASTER** is a family of tools with shanks and interchangeable heads for a variety of milling applications including ball nose, straight shoulder and slotting and slotting applications. This system features **ISCAR's** unique threaded carbide heads for superior performance, short indexing time and improved economy.

As there is no setup time for head replacement.

**Dmin. 6-8 mm**

# Hole Making

## **SUMOCHAM** FLAT HEAD

### **Flat SUMOCHAM Drilling Heads**

ISCAR is extending the application range of the successful SUMOCHAM drilling line by adding flat face drilling heads.

The new flat face drilling heads are designated FCP, designed for drilling steel components (ISO P/K material group).

## **SOLIDDRILL**

The unique requirements of the mass production industries make specially tailored drills essential for optimal performance. ISCAR's trained design engineers ensure that customers have the finest multifunction drilling tools for their required profiles.

**Dmin. 0.8 mm**

# Hole Making

## **SUMOCHAM IQ** CHAMDRILL LINE

### **HCP-IQ SUMOCHAM Drilling Heads**

ISCAR is expanding the **SUMOCHAM** drilling head options, by introducing a revolutionary drilling head geometry that features concave cutting edges which substantially enhance the self-centering capability of the drill.

By eliminating the need for a pilot hole, the new drilling heads shorten machining cycle time and the number of tools required for the drilling operation. This can provide a substantial cost reduction.

## **SOLIDH-REAM** **INDEXH-REAM** **BAYOT-REAM**

Solid carbide reamers for standard H7 reaming in the range of 3 to 40 mm are available in cylindrical or Morse cone shanks, with straight or helical flutes. Also available is an interchangeable, shell reaming head system with a unique quick-change mechanism, in IC08 submicron grade or IC908 PVD coating for high speed machining.

**Dmin. 3 mm**

# Deep Drilling

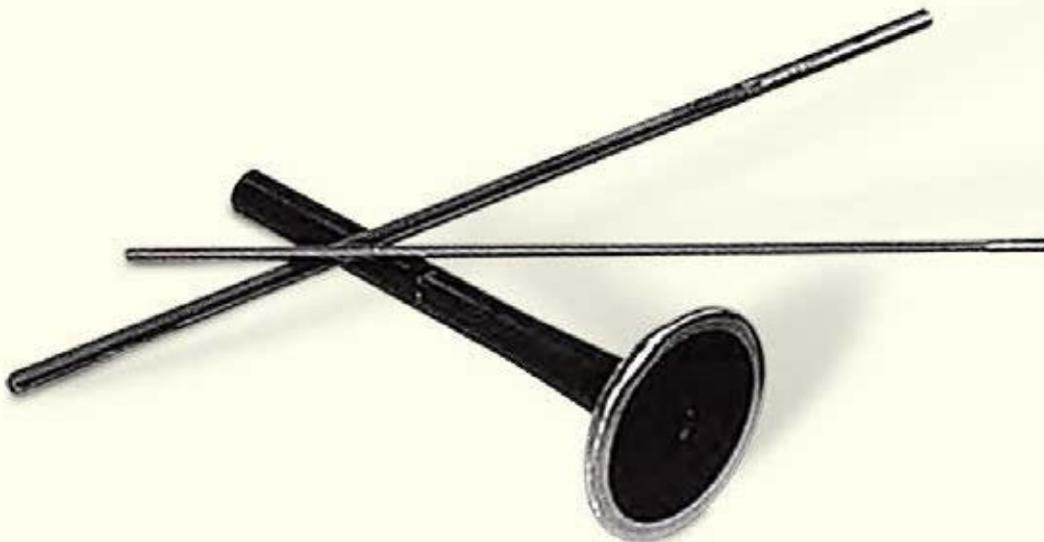

## **GUNDRILLS**

ISCAR's gundrill consists of a single piece carbide head, a streamlined shank and a driver through which coolant flows to the working end where it is most needed. Chips are evacuated along the V-shaped external flute. Features:

- Drilling precision of IT7 to IT9 tolerances can be reached
- High precision hole center alignment
- Surface roughness of 0.4 to 1.6  $\mu\text{m}$  is easily obtained
- Reboring operations are often unnecessary

Whirling tools are provided on request. Attached is a list of available whirling tools according to the machine model being used.

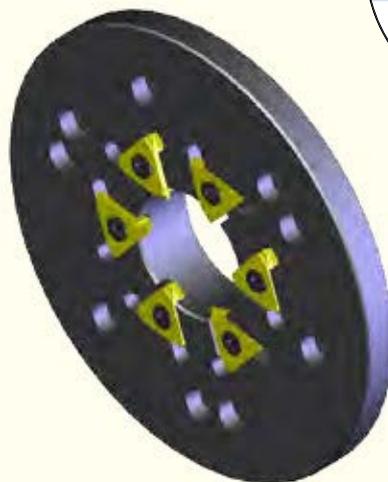

The customer should specify his specific thread profile and the required number of inserts in the cutter (or leave this decision to ISCAR designers).

The inserts are made from PVD coated grade IC908.

## Advantages

- Increased productivity
- Increased tool life
- Quick setup
- Enables producing long threads
- Enables high helix angle threads
- Short machining time
- High quality surface finish

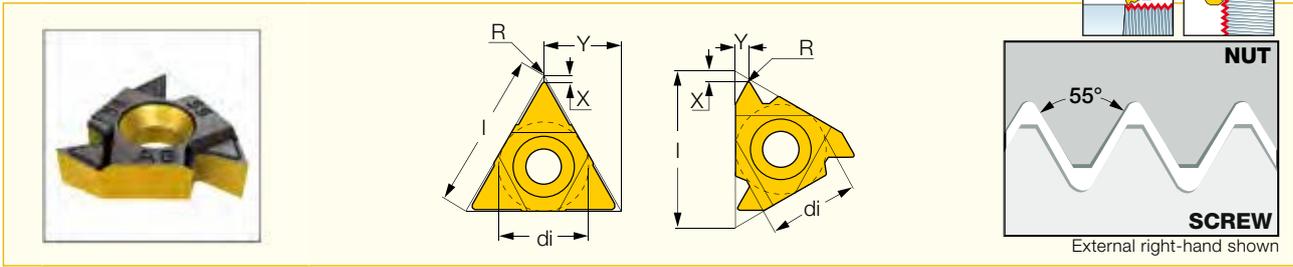

**Lead time for whirling tools and inserts is 6-7 weeks.**

#### Drilling Solid Material

Range:  
**D<sub>min</sub>**=12.5 mm  
**D<sub>max</sub>**=14 mm

To achieve required diameter  $\varnothing D$ , position tool as shown at  $D + x$  ( $x=0.10$ ) to compensate for tool deflection. Use pecking cycle, pulling back 0.1 mm after each 1 mm of DOC.

Maximum feed for steel:  
 0.05 mm/rev;  
 For stainless steel:  
 0.03 mm/rev

### The Twisted Insert for Face Machining

The double-ended, twisted insert body makes it possible to machine to depths much larger than insert length. Unique chipformer for controlled chip flow in axial and radial directions. The rear angle is slanted in relation to the frontal edge so it does not come into contact with the machined groove surface, as tool penetrates deeply into the workpiece.

• JT chipformer has the basic positive configuration of the J-type and a reinforced negative frontal edge. Most suitable for soft materials at low to medium feeds.

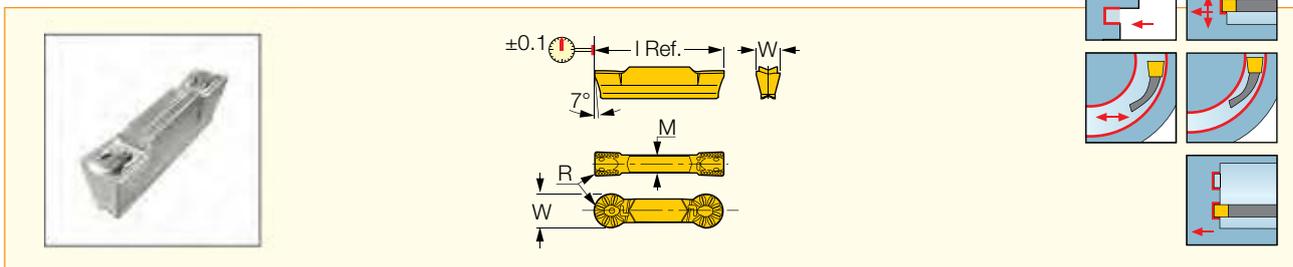

<sup>(1)</sup> Sharp corners <sup>(2)</sup> Single-ended insert. <sup>(3)</sup> No depth limit

## Single Flute Gundrill

ISCAR's gundrill consists of a single piece carbide head, a streamlined shank and a driver through which coolant flows to the working end where it is most needed.

Chips are evacuated along the V-shaped external flute.

## Drilling Head

The carbide head is tapered on its length to reduce friction. The taper angle depends on the type of material to be drilled. For high precision drilling, the taper should be reduced to a minimum. Note that when the head is resharpened, the diameter of the drill changes, affecting the hole tolerance.

## Shank

The cross-section of the shank is V-shaped with coolant holes. It is made of hardened steel that is highly resistant to twisting (for information on carbide shanks, see next page). This cross-section provides the optimal conditions for twist resistance, coolant flow and chip evacuation.

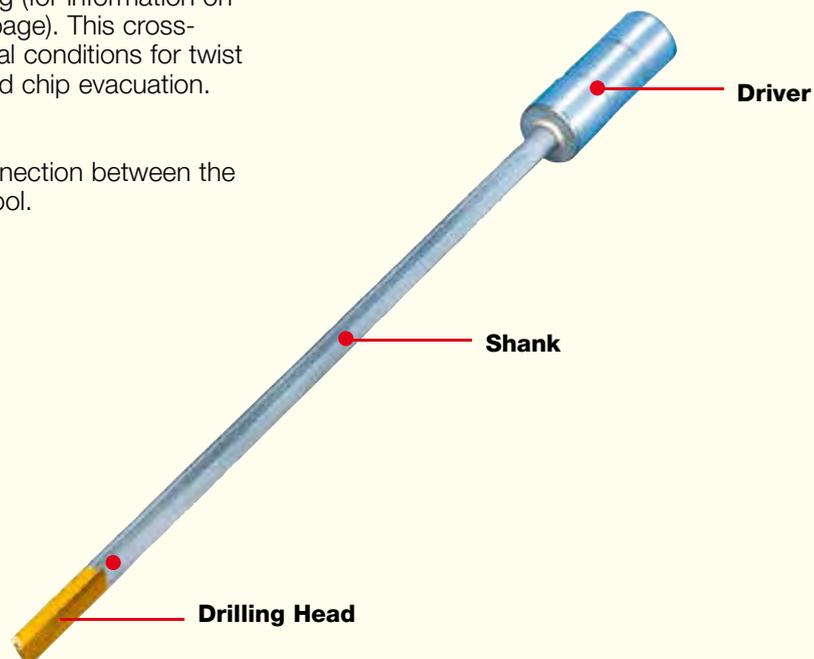

## Driver

The driver ensures the connection between the gundrill and the machine tool.

## Carbide Tipped Gundrill Range

Drill Diameter	Max. Flute Length
2.50 to 3.09	1100
3.10 to 5.99	2500
6.00 to 11.39	3000
11.40 to 40.00	3500

Overall length=flute length+driver length

## Advantages

- Drilling precision of IT7 to IT9 tolerances can be reached.
- Excellent straightness and concentricity.
- Maintains high precision hole center alignment.
- Surface roughness of R 0.4-1.6mm is easily obtained.
- Reboring operations are often unnecessary.

ISCAR's advanced gundrill technology provides superior geometric and dimensional quality for both deep and shallow drilling.

The drills are available in the range of 2.5 to 40mm.

## ISCAR Single Flute Solid Carbide Gundrills

Another type of gundrill is made with integral tip and shank, made of solid carbide with either a steel or a carbide driver.

These drills are designed for conventional machines, machining centers and lathes. This style of gundrill is available from 0.9-16.00mm and can be used on various types of materials. It provides superior rigidity and optimal coolant flow rates. As a result of its rigidity, up to 100% higher feed rate can be reached.

When using the small diameter drills, it is crucial to adhere closely to recommended drilling parameters.

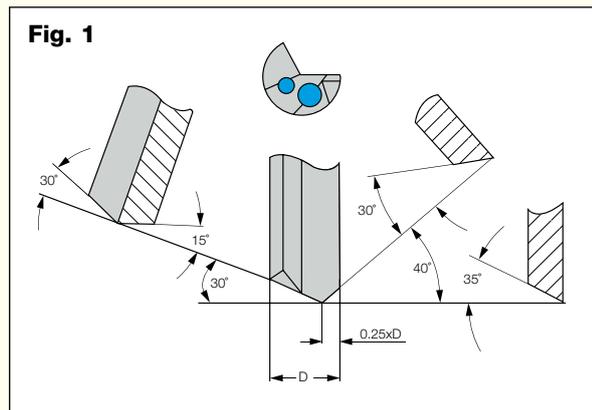

## Solid Carbide Gundrill Range

(with or without brazed steel driver)

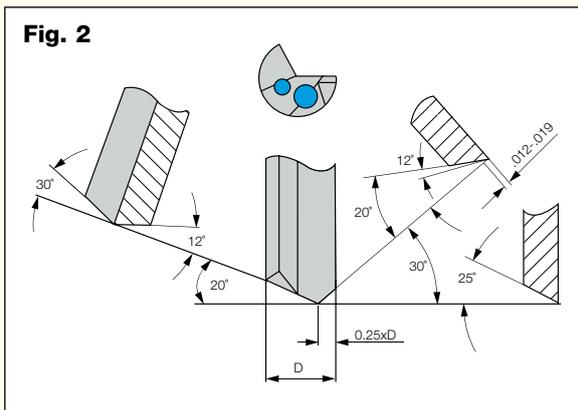

Drill Diameter	Max. Flute Length
0.9 to 16.00	300

## Standard Gundrill Head Sharpening Angles

Subject to the required tolerance, cutting performance and desired chip shape, the following standard sharpening angles are recommended (shown in figures 1-3).

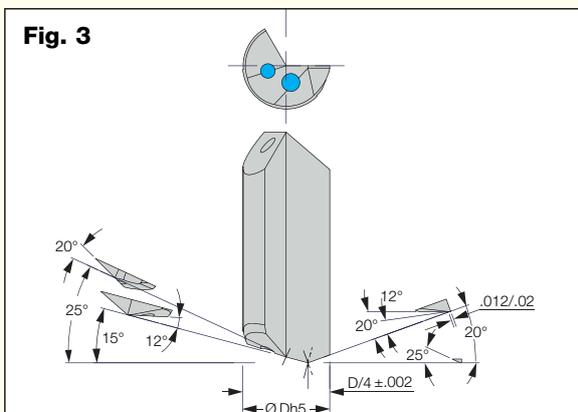

Standard sharpening for 0.9 to 4mm drill diameters

Standard sharpening for 4 to 32mm drill diameters

**Note: For special or semi-standard gundrills, special geometries will be offered to match the application.**

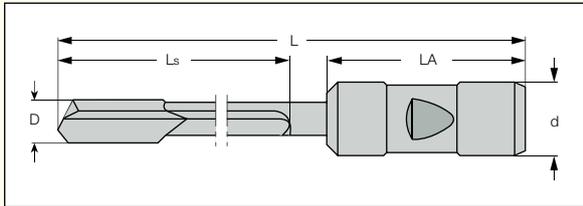

Standard sharpening for 32 to 40mm drill diameters

## GFI ER - Floating Reamer Collet Chuck

Floating chuck - adjusts the misalignment between reamer and workpiece hole to ensure the same accuracy as the reamer itself.

### Application

The GFI floating chuck is a unique holder that compensates for the radial misalignment existing in the reaming operations carried out on vertical and horizontal machine tools.

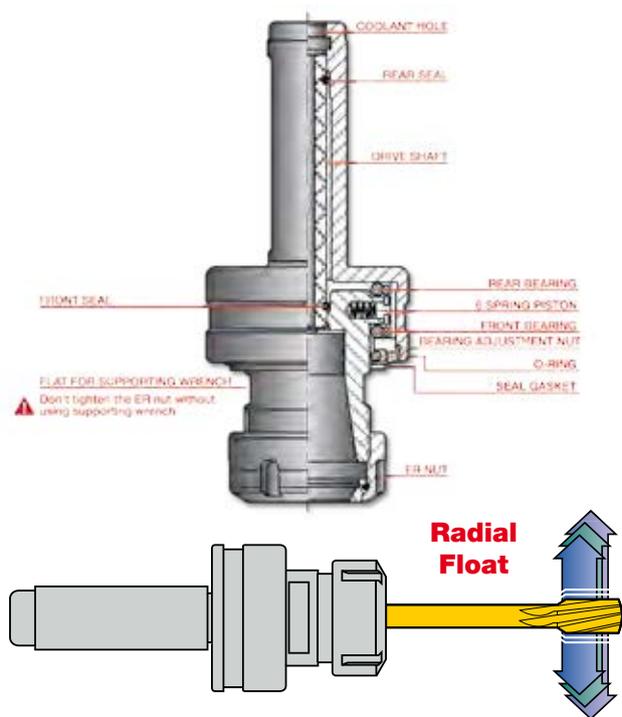

### Features

Radial self-floating mechanism compensates for misalignment between reamer and workpiece to ensure the same tolerance as the reamer itself.

The special self-centering mechanism eliminates tapered and oversized bores.

### Advantages

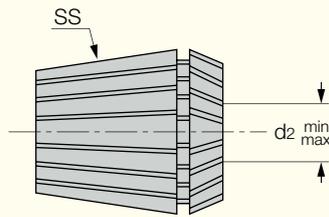

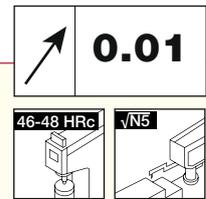

Unique ball bearing and axle drive shaft structure enables vertical and horizontal machining. Precise and efficient clamping with ER spring collets or ER COOLIT collets.

## Quality Standard

ISCAR has been certified by the prestigious Standards Institution, as being in full compliance to ensure delivery of the finest quality goods. Quality control facilities include the metallurgical laboratory, raw metal testing, an online testing procedure and a machining center for tool performance testing and final product inspection. Only the finest products are packaged for entry into ISCAR's inventory.
